

The Friendly Bear

Help! Two brothers were separated in the middle of the forest, and the youngest doesn't know the way out! A friendly bear has decided to aid the brother, but she can only help if the obstacles to the village are removed.

Objective: In order to lead the younger brother out of the forest, the bear must be strong enough to push boulders aside, climb trees, or bash logs out of the way. The bear must pick up fish and berries to become strong enough to do these things. If she picks up bad food, the bear cannot move the obstacles.

Mechanics: Walk, run, and jump to come across the food. After the health/strength bar is filled, a special power may be used to remove certain obstacles in the way.
